

Scenario:

The user is a heavy nicotine smoker who smokes 2 boxes of cigars each day. The user discovers my app called noSmoke and sets up his profile to stop his nicotine addiction.

Tasks

- Open the app
- Select smoking substance
- Input personal info
- User is prompted with an optional in-App purchase (shock bracelet)
- User goes through an AI facial scan
- The application keeps track of the user's smoking habits before every meal, user is shocked once because the AI detected nicotine use.

2 things to fix:

- Improve UI
- Give the user more options

2 things that shouldn't change:

- The back and forth buttons at the bottom
- The inclusion of a shock bracelet
